## Add Customer

### Pre-requisites

Ensure you are working and pushing to your own branch

Create a new package called something like **Table assignment**

Please make use of test NG annotations

reference: tables demo package and BankProjectGenerateDataKeywords

### Test setup:

Navigate to <http://demo.guru99.com/test/web-table-element.php>

create a method that returns the number of table rows

create a method that returns the number of table columns

print the number of rows and columns on the console

Assert that column 2 row 1 has a string value of A

Print records that have a %change > 4 to a file

create a testng xml file that executes this test case
